

Dufferin Aggregates Sustainable Solutions

Committed to supplying quality, sustainable materials to support the growth and development of the communities we all live, work and play in.

We are proud to provide a variety of sustainable solutions like recycled concrete aggregate and recycled asphalt pavement.

The Dufferin Aggregates Advantage

We manage our portfolio of sustainable solutions with the same care and commitment to our customers, our communities and the environment that you have come to expect from us.

Our Quality Management System (QMS) ensures we are consistently delivering high quality products through sustainable processes:

- Stringent receiving and sorting processes through our QMS for recycled materials
- Robust quality control systems rigorously test our recycled materials

Our CSC* certified aggregates ensure that extraction processes are environmentally and socially responsible.

Rely on Dufferin Aggregates Recycled Solutions for Quality-Tested, Recycled Products for Your Next Project

- Recycled products can limit environmental impact by reducing the need for virgin aggregate and providing a use for returned concrete and asphalt, keeping these materials out of landfill.
- The use of recycled or reclaimed material is permitted as part of the Ontario Provincial Standard Specifications (OPSS) 1010 – Base, Subbase, Select Subgrade and Backfill Material in Granular A, M, S and B Types I and III material.
- Our technical and sales support teams make sure appropriate materials and mix designs are used for your project to ensure performance and quality.

**Cornerstone Standards Council certified aggregates are available at several of our sites.*
